DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on May 13, 2011 has been entered.

Allowable Subject Matter

2. Claims 1-4, 7-10, 17, and 19-27 are allowed.

3. The following is an examiner's statement of reasons for allowance: The claims recite a method of forming optical film. The method includes forming a metal layer on a first substrate;

subjecting the metal layer to at least one of a thermal oxidation treatment, an oxygen plasma treatment, and a treatment with oxidizing solution to form a metal oxide layer on the metal layer;

forming an insulating layer on the metal oxide layer;

forming a subject body having an optical filter on the insulating layer;

attaching a second substrate to the subject body by using a first adhesive material so that the second substrate faces the first substrate;

attaching a support medium to the second substrate by using a peelable adhesive agent;

separating the first substrate from the subject body in a region between the metal layer and the insulating layer; and

separating the support medium and the peelable adhesive agent from the second substrate, wherein the first substrate is a glass substrate. Rosenfeld et al discloses a method of producing released vapor deposited films. The method includes providing a first substrate of foil, sheet, or plate of an inexpensive co-anodizable metal such as aluminum (Col 4, lines 35-39) depositing a valve metal layer by sputtering, evaporation, and etc. onto the substrate (Col 4, lines 40-43), anodizing the valve metal layer to form a layer of metal oxide layer on the valve metal layer (Col 3, lines 57-59), applying at least one additional layer of material such as oxides, nitrides, carbides, which would act as insulating layer, onto the valve metal oxide layer (Col 4, lines 53-56), for an optical multilayer film or filters, alternating layers of dielectric material with high and low refractive index are applied to the valve metal oxide layer (Col 5, lines 53-66), i.e. second substrates, which face the first substrate, attaching a material or support medium to the outer surface of the releasable films or layers with adhesive and peeling the film or layer from the valve metal layer with the separation between the valve metal layer and the metal oxide layer and the adhesive used for adhering the material such as polymer, paper, textiles, and wood and/or one which can be readily removed from the layers such as soluble polymer or one which can be oxidized or decomposed by irradiation to release or detach the releasable film (Col 4, line 62 to Col 5, line 18) or heat sealable polymer (Col 5, lines 15-18) to allow the removal of the attached support medium, and finally transfer to a final substrate (Col 3, lines 34-42). Furthermore, the

optical films are supported on a plastic substrate or second substrate, a support medium (Col 5, lines 53-57) and comprise a stack of alternating layers of dielectric material or filters, which are applied or formed on the valve metal layer (Col 5, lines 60-66), wherein the additional filters applied to the first filter satisfied the second substrate attached to the first optical filter or subject body since the first optical film on the valve metal layer is a subject body. Rosenfeld et al is silent as to the first substrate is a glass substrate. A search of the prior art of record did not disclose reference or references in combination with the recited feature.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to SING P. CHAN whose telephone number is (571)272-1225. The examiner can normally be reached on Monday, Tuesday, Thursday, and Friday 10:00PM-4:00PM.
